## A210 Series 90° Double Acting Pneumatic Actuators Working Principles

Double acting actuators are rotated by supplying air to related port until it reaches desired position.

### Counterclockwise Rotation (CCWR)

Air to port **B** forces the pistons inwards, causing the pinion to rotate clockwise while the air is exhausted from port **A**.

Air to port **A** forces the pistons outwards, causing the pinion to rotate counterclockwise while the air is exhausted from port **B**.

### Clockwise Rotation (CWR)

Air to port **B** forces the pistons inwards, causing the pinion to rotate counterclockwise while the air is exhausted from port **A**.

Air to port **A** forces the pistons outwards, causing the pinion to rotate clockwise while the air is exhausted from port **B**.

## A210 Series 90° Spring Return Pneumatic Actuators Working Principles

Single acting actuators are rotating one side by air while the springs are loaded and return action is done by means of spring force

### Counterclockwise Rotation (CCWR)

Loss of air at port **B**, causing the energy stored springs to force the pistons inwards and rotating the pinion clockwise.

Air to port **A** forces the pistons outwards, causing the pinion to rotate counterclockwise while the springs are compressed.

### Clockwise Rotation (CWR)

Loss of air at port **B**, causing the energy stored springs to force the pistons inwards and rotating the pinion counterclockwise.

Air to port **A** forces the pistons outwards, causing the pinion to rotate clockwise while the springs are compressed.
